

# HOW SANOFI IS BUILDING A SUSTAINABLE ENVIRONMENT

Sanofi is working to minimize the impacts of its activities and medicines on the environment through its Planet Mobilization environmental sustainability program, an approach that engages everyone at Sanofi. The program covers the entire lifecycle of its products: from the raw materials to their potential end-of-life impact.

Sanofi believes that working closely with its suppliers to reduce their overall environmental impact, will lead us towards a more sustainable sourcing of raw materials. In line with the Science Based Target initiative, an objective to reduce value chain GHG emissions has been set: -14% from 2019 to 2030.
