

Translational Science Hub begins search for medical and scientific talent

Brisbane, Tuesday 14th March. Sanofi has opened the first wave of senior medical research career opportunities available at the Translational Science Hub in Queensland.

To create a unique global vaccines R&D network focused on mRNA technology and translational science, Sanofi is on the look-out for a Director of Clinical Operations, a Global Clinical Development Strategic Lead, Global Study Managers, a Strategic Partnerships Lead and a Project Coordinator. All positions will be located at the Translational Research Institute in Brisbane.

The Translational Science Hub, a \$280 million partnership announced in December by Sanofi and the Queensland Government, will link world-class researchers in Queensland with scientists at the Sanofi mRNA Centre of Excellence in France and the United States. This partnership includes the University of Queensland and Griffith University and will place Queensland at the forefront of vaccine development and biomedical research in Australia.

The Translational Science Hub will initially focus on the evaluation of a new generation of mRNA vaccines and the development of mRNA immunisations, including a world-first mRNA vaccine for chlamydia.

Hon. Dr Steven Miles MP

Queensland Deputy Premier

"The Translational Science Hub is set to create up to 200 jobs and deliver long-term benefits for local manufacturing, the biomedical supply chain, and the health of Queenslanders. It's an attractive offering for medical research specialists, to be linked with global experts and to put your mark on home-grown research and innovation."

"On top of that, Queensland is the best place to live, work and play."

Dr Iris Depaz

Country Medical Lead, Sanofi Australia and New Zealand

"We are offering Global positions located in Queensland. The people we hire will have regular contact with Sanofi scientists in France and the US, while also working with our university partners in Queensland to develop the next generation of vaccines. This collaboration and knowledge sharing will accelerate the development of vaccine technology that has the potential to improve public health."

"These newly opened positions are truly special career opportunities for qualified people wanting to be part of a global research network while living in Queensland."

Position descriptions are available via LinkedIn and the Sanofi Careers website www.sanofi.com/careers.

Sanofi operates 20 research and development sites around the world exploring new medicines and vaccines. This includes translational science, where researchers work to translate early observations in the laboratory into clinical results that directly benefit people.

About Sanofi

We are an innovative global healthcare company, driven by one purpose: we chase the miracles of science to improve people's lives. Our team, across some 100 countries, is dedicated to transforming the practice of medicine by working to turn the impossible into the possible. We provide potentially life-changing treatment options and life-saving vaccine protection to millions of people globally, while putting sustainability and social responsibility at the centre of our ambitions.

Sanofi is listed on Euronext: SAN and NASDAQ: SNY
