Building the Road to Net Zero

Today, nearly every industry around the world has one thing in common: We’re all racing towards net zero. Climate change is one of the most pressing challenges of our time, and at Sanofi, we’re accelerating our commitments and transforming our climate ambitions into concrete actions. And we’re stepping up to lead by example internally, and externally with our partners.

A Snapshot of Our Greenhouse Gas (GHG) Emissions in 2022

We’re reducing emissions by 1 and 2 degrees Celsius in our value chain, and working with our suppliers to make real carbon reductions.

**What Remains**

By addressing the employment we, the reduction efforts of our suppliers, and the energy use and emissions across our value chain initiatives, we are working towards achieving our collective future.

**Our Reduction Commitments**

A strong net zero approach always starts with reducing emissions. And we’ve made commitments to reach specific climate objectives for 2030 and 2045.

**Reduce GHG emissions...**

We’ve reduced our total emissions by 55% in 2022. Our target is to reach net-zero emissions by 2045. Sanofi is a signatory of Canada’s net-zero commitment.

...From activities sources (Scope 1 & 2)

We’ve reviewed in our net-zero carbon footprint initiatives that provide energy and emissions savings in all our operations. We’ve made investments in new technologies and processes to achieve these targets. Our progress targets aligning new facilities will be for environmental and social factors.

...From our value chain (Scope 3)

Sanofi has taken steps to address our supply chain issues and support our suppliers in reducing our traceability of Scope 3 emissions.

**Source renewable electricity**

We’ve made commitments to source 100% of our electricity from renewable sources. This goal is aligned with all our operations by 2045. It is already in force for half of our French sites.

**Foster an eco-fleet**

Fostering sustainable practices and promoting our collective role in improving the environment, reducing carbon and working towards our net-zero and carbon-neutral fleet.

**Spotlight On: Our 2022 Carbon Offsetting Program**

We’re developing a community-focused carbon offsetting program that will not only avoid a new emission from the atmosphere. In selecting projects, we’re seeking balance between projects that will not only avoid or remove emissions from the atmosphere, but will also generate a positive impact on the communities and the environment. The year, we’re focusing on two projects in partnership with Ecosia.

500 hectares of mangroves will be restored through reforestation with local communities in Indonesia, with a total of 2,000 hectares set to be protected and managed for the next 20 years.

**Breakdown of Those Buzz Words**

- Carbon Neutrality
- Scope 1 - Direct emissions (eg. fuel combustion in company owned facilities)
- Scope 2 - Indirect emissions (eg. purchased electricity, heating, cooling)
- Scope 3 - Indirect emissions (eg. purchased goods and services, transportation, e-commerce, employee commuting, company travel)
- Net Zero
- Carbon Offsetting
- Scope 1 & 2
- Scope 3
