*Respiratory
Syncytial virus*

RSV is the most common cause of lower respiratory tract infection, such as bronchiolitis and pneumonia, in infants and young children^{1,2}

RSV is also a leading cause of hospitalizations in all infants^{3,4}

RSV disease is unpredictable.
It is difficult to know which infants will develop severe disease requiring medical care⁵⁻⁷

Most hospitalizations due to RSV occur in *otherwise healthy* infants born at term^{8,9}

Talk to your doctor - or healthcare professional - *about preventative options* to help protect infants against RSV¹⁰

*All infants are at risk from RSV*⁶
